Science Publications (SCIPUB) launches the first issue of the World Journal of Civil Engineering and Architecture (WJCEA), which is an international journal dedicated to the latest advancements in civil engineering and architecture. The goal of this journal is to provide a platform for engineers, researchers, scientists and academicians working in research and practice all over the world to promote, share, and discuss various new issues and developments in all aspects of Civil Engineering and Architecture, including all related disciplines. WJCEA serves both the academic and industrial communities around the world and contributes to the progress and application of science through its dissemination.

World Journal of Civil Engineering and Architecture (WJCEA) is committed to maintaining high standards through a rigorous peer review, together with strict ethical policies. Any infringements of professional ethical codes such as plagiarism, fraudulent use of data, or bogus claims of authorship should be taken very seriously by the editors, with zero tolerance.

All original research papers published by World Journal of Civil Engineering and Architecture (WJCEA) are made freely and permanently accessible online immediately upon publication. To be able to provide open access articles, WJCEA defrays operation costs from authors and subscription charges only for its printed version. Open access publishing allows an immediate, worldwide, barrier-free, open access to the full text of research papers, which is in the best interests of both the academic and industrial communities.

On behalf of the editorial board and Science Publications (SCIPUB), I would like to invite engineers, researchers, scientists and academicians from all over the world to contribute by the quality of their articles to the success of World Journal of Civil Engineering and Architecture (WJCEA), which is theirs and which is a tool for promoting publications. I hope that the both scientific community and industrial community will welcome it favorably and will find this journal interesting and useful for careers in academia or engineering industry, also we ask our dear readers to share their comments and proposals.

Due to the immensity of each scientific discipline, and given that the real and effective evaluation of a scientific article can only be carried out by experienced reviewer in their field, I invite through this opportunity all those who are interested in the whole world to join our journal as reviewers or as editorial board members.
